

Get Recipes

Retrieves all recipes stored in the local Flask API.

Request

- **Method:** GET
- **URL:** `http://127.0.0.1:5000/recipes`
- **Auth:** None required
- **Headers:** None required
- **Query Parameters:** None

Response

Returns a JSON array of recipe objects. Each recipe object contains at minimum an `id` field.

Example Response:

```
JSON
[
  {
    "id": 1,
    "name": "Spaghetti Bolognese",
    "ingredients": ["pasta", "ground beef", "tomato sauce"],
    "instructions": "Cook pasta. Brown beef. Mix with sauce."
  }
]
```

Status Codes

Code	Description
200	Success — returns array of recipes

Automated Tests

This request includes the following test assertions:

- Status code is `200`
- Response time is under `500ms`
- Response body is a JSON array
- Each item in the array has an `id` field (if the array is non-empty)
